

## How can I restore my shoreline and is help available?

There are a few options to create a vegetated shoreline, and help is available. Consider one or more of these options:

### 1. Natural Recovery-No Mow

Simply not mowing an area along the lake is an easy and cost effective way to establish shoreline vegetation.

### 2. Accelerated Recovery-Do it yourself

Plant native trees, shrubs, grasses and/or wild-flowers along your shoreline.

### 3. Technical Assistance- Cost Sharing Help

We provide advice, design and financial assistance to restore your shoreline or fix erosion problems you may have.

## “Washburn County Shoreline Restoration Program”

The County Land and Water Conservation Department has funding available to help waterfront landowners

### The Program Will:

1. Pay up to 70% of all costs associated with re-establishing the native lakeshore vegetation (you pay 30%).
2. Provide expertise in designing a restoration plan to meet your needs and desires.
3. Provide assistance in the planning process

Before Restoration

After Restoration

## Cost-Share Criteria

To become eligible, landowners must sign a cost-share application and agreement prior to any installation.

Eligible costs include materials and labor for:

- Site preparation
- Seeding
- Planting plugs, shrubs, and trees
- Mulching
- Erosion control measures

### Program Requirements

- ◆ Only NATIVE PLANTS may be used.
- ◆ \$50.00 maximum per tree/shrub
- ◆ \$4.00 maximum per plant plug
- ◆ \$7.00 maximum on ferns
- ◆ \$75.00 maximum on trees transplanted with a tree spade.
- ◆ \$30.00 maximum per cubic yd of mulch.
- ◆ 30% of groundcover planting area must be a grass or grass-like plant.
- ◆ A cost estimate is included that will list the estimated hours for installing the restoration.
- ◆ \$10.00/hour for landowner labor rate. (labor can help off-set the 30% cost-share)

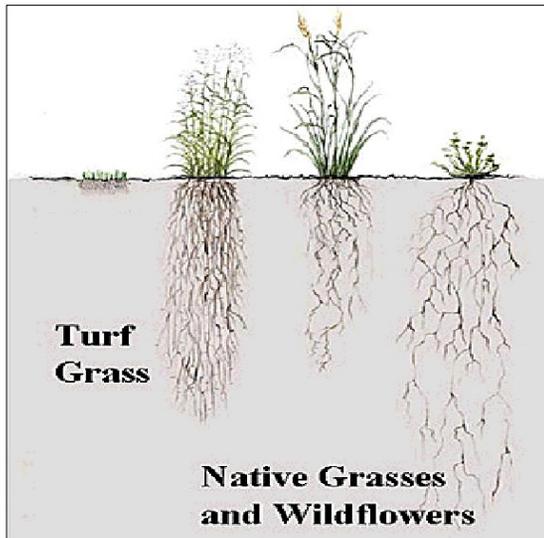

Restoring a steep mowed lawn to natural vegetation

## What are the Benefits?

**A vegetated shoreline helps protect the quality of the lake by:**

1. Increasing infiltration of unwanted nutrients (phosphorus) that can lead to weed growth and algae blooms.
2. Decreasing the presence of geese where you recreate along the shore.
3. Improving habitat for fish and numerous species of wildlife.
4. Discouraging stands of invasive species from moving in.
5. Reducing runoff and soil erosion into the lake.
6. Providing recreational fun for current and future generations to enjoy.

Deeper roots allow more water to soak into the soil, slowing erosion.

90% of all lake life is born and fed in the area where land and water meet.
